

DevOps basics: Introduction to GitHub

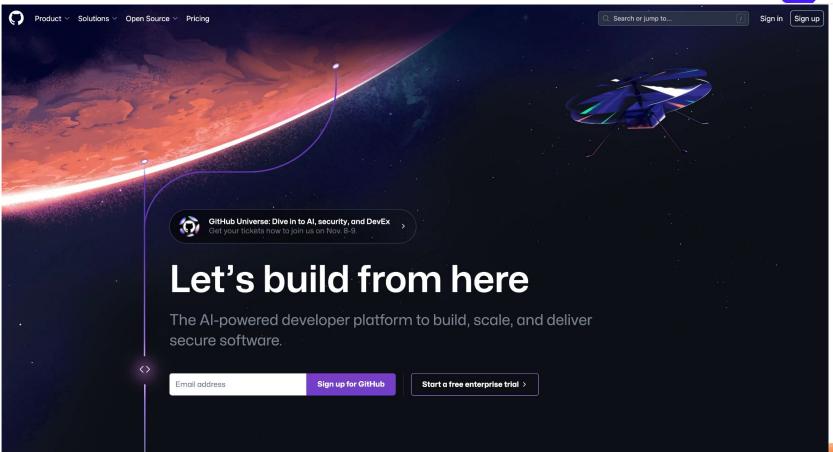

#### What is?

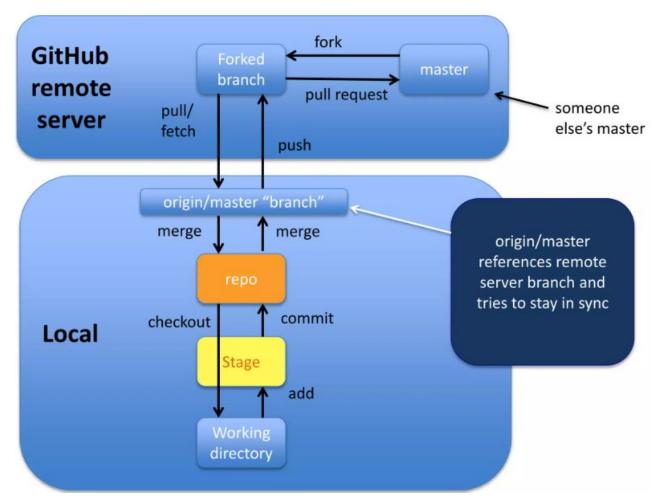

#### **GitHub**

- A platform to host git code repositories
- https://github.com/
- Launched in 2008
- Most popular Git host
- Allows users to collaborate on projects from anywhere
- GitHub makes git social!
- Free to start

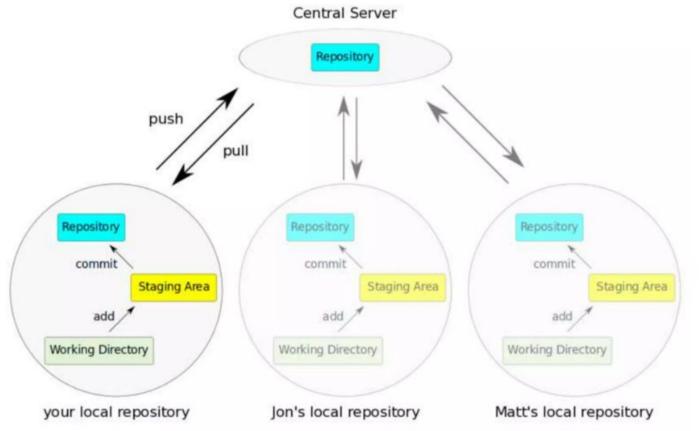

# **Important to remember**

Sometimes developers choose to place repo on GitHub as a centralized place where everyone commits changes, but it doesn't have to be on GitHub.

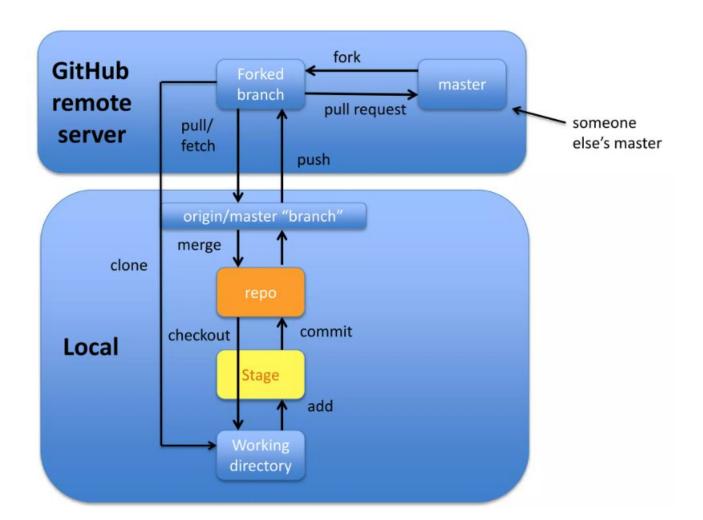

git clone URL

### How do I link my local repo to a remote repo?

git remote add <alias><URL>

Note: this just establishes a connection ... no files are copied /moved

Note: Yes! You may have more than one remote linked to your local directory!

Which remotes am i linked to?

git remote

# Pushing to a remote repo

git push local\_branch\_alias branch\_name

# Fetching from a remote repo

git fetch remote\_repo\_name

Fetch in no way changes a your working dir or any commits that you have made.

- Fetch before you work
- Fetch before you push
- Fetch often

Git merge must be done to merge fetched change into local branch

git commit -a

Allows one to add to staging index and commit at the same time

**Grab everything in working directory** 

Files not tracked or being deleted are not included

## Renaming and deleting branches

git branch -m/--move old\_name new\_name

git branch -d branch\_name

Note: Must not be in branch\_name

Note: Must not have commits in branch\_name unmerged in branch from which you are deleting

git branch -D branch\_name

Note: If you are really sure that you want to delete branch with commits
